

Distribution of Educational Content with 5G

Objective: To offer students at the University of Malaga access to interactive educational tools that allow them to complete their training remotely.

Description:

Access will be provided using a 5G network that allows access to computing resources at the edge of the network which, coupled with the low latency provided by 5G, allows students to interact with trainers in real time.

- Access to a Virtual Hospital for medical training
- Access to Virtual Campus training rooms
- Access to a Remote Desktop with specialised resources for internships.
- Access to Digital Twins of sophisticated equipment (robot arms, digital Oscilloscopes, ...)
